IS-9312 Wire system for Maxi 2270 mm (89.4") panels

IS-9318 Brochure holders A4 / US letter with 4 connectors

Please observe: This system can only be used with a straight Compact or Straight graphic wing module

Mounting instruction

1 Push in the small H-profile at the top of the beam and then mount the extra beam into top of that profile.

2 Mount this assembly at top of the posts.

3 Attach the graphic panel and adjust the base beam so that its bottom edge is level exactly with the bottom edge of the graphic.

4 Hook the top connector of the wire assembly to the top beam.

5 Mount the first bottom connector.

6 Push the bottom fitting of the wire assembly into the connector until the wire is tight. Repeat this process with the top fitting.

7 Attach the four identical grip connectors to the brochure holder, evenly spaced. Do not overtighten.

8 Remove the side screws in the grip connectors, position the wire inside the grooves, and reinstall the side screws.

9 You can now attach more brochure pockets.
